

Punched Metal Slats

A Ventilation System for Roll Up Doors

Fenestrated Slats for Light and Air Flow

If your space needs ventilation while maintaining security, or your bay needs visibility even when it's closed, a fenestrated roll up door may be your solution. Add punched slats to your roll up door project, and you can improve ventilation and visibility to the work space.

American Door has a variety of patterns to choose from, and you can mix and match the treatment with most other options such as a pass door, security grille, and even curved slats. Most or just part of the rolling door can be treated according to specifications. It's a simple solution for increasing safety and improving air quality.

- >> Adds Visibility and Ventilation
- >> Multiple Patterns Available
- >> Multiple Hole Sizes
- >> Rugged 18 Gauge - 22 Gauge Steel
- >> Combines with Other Roll Up Door Treatments
