

Dock Leveler: Pour-In Installation

Quicker Install with Incredibly Strong Anchoring

Perfect Installation without On-Site Welding

For the cleanest and most securely anchored dock leveler possible, American Door offers pour-in installation. It takes less hardware, less concrete forms, and no on-site welding. When it's complete, your dock leveler is in a perfectly fit, snug pit where it can do its best work with minimal down time.

American Door's pour-in pan dock leveler can get your site ready for trucks fast. If your site already has the foundation poured, not to worry. We can come in and prepare the site, removing existing concrete, or even an older unit whose retirement has been well earned. We'll tear it out, haul it off, and put you back into full-speed operation.

- >> Maximum Durability
- >> Safe, Level Installation
- >> Full Functionality
More Quickly
- >> Built-In Side and Rear
Curb Angles
- >> Optional J-Hooks for
Front Curb Angle
